Pearson Edexcel International A Level
in Statistics S2 (WST02/01)

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

PEARSON EDEXCEL GCE MATHEMATICS

General Instructions for Marking

1. The total number of marks for the paper is 75

2. The Edexcel Mathematics mark schemes use the following types of marks:

- **M** marks: Method marks are awarded for 'knowing a method and attempting to apply it', unless otherwise indicated.
- **A** marks: Accuracy marks can only be awarded if the relevant method (M) marks have been earned.
- **B** marks are unconditional accuracy marks (independent of M marks)
- Marks should not be subdivided.

3. Abbreviations

   These are some of the traditional marking abbreviations that will appear in the mark schemes.

   - bod – benefit of doubt
   - ft – follow through
   - the symbol $\surd$ will be used for correct ft
   - cao – correct answer only
   - cso - correct solution only. There must be no errors in this part of the question to obtain this mark
   - isw – ignore subsequent working
   - awrt – answers which round to
   - SC: special case
   - oe – or equivalent (and appropriate)
   - d… or dep – dependent
   - indep – independent
   - dp decimal places
   - sf significant figures
   - * The answer is printed on the paper or ag- answer given
   - $\sqsubset$ or d… The second mark is dependent on gaining the first mark

4. All A marks are 'correct answer only' (cao.), unless shown, for example, as A1 ft to indicate that previous wrong working is to be followed through. After a misread however, the subsequent A marks affected are treated as A ft, but manifestly absurd answers should never be awarded A marks.

5. For misreading which does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, in that part of the question affected.

6. If a candidate makes more than one attempt at any question:
    - If all but one attempt is crossed out, mark the attempt which is NOT crossed out.
    - If either all attempts are crossed out or none are crossed out, mark all the attempts and score the highest single attempt.

7. Ignore wrong working or incorrect statements following a correct answer.

(e)	$W \sim \text{Po}(8)$	B1
	$\text{P}(W \leqslant 3) = 0.0424\ (< 0.05)$	M1
	$\text{P}(W \leqslant 4) = 0.0996\ (> 0.05)$	
	Largest possible value of f is 3	A1
		(3)
		Total 11

	Notes
(a)	1st B1 for writing or using $\text{Po}(\frac{1}{4})$. May be implied by a correct answer or by awrt 0.78
(b)	M1 for $(1-0.779)^3$ or (1 – 'their (a)')^3
(c)	B1ft for writing or using B(7, 'their a'). May be implied by M1 scored.
	M1 for a correct binomial expression for P(Y = 5) (ft their value of p). Allow $\binom{7}{2}$ etc or 21
	May be implied by the correct answer but if $p \neq 0.779$ or better we must see expression
ALT	They may use $W \sim$ B(7, " 1 – their (a)") for B1ft then P(W = 2) for the M1
(d)	B1 for both hypotheses correct. Must use λ or μ for either 8 or 0.25 [Use of $\leqslant$ is B0]
	If (d) is blank but correct hypotheses are seen in (e) can award retrospectively BUT if hypotheses are given in (d) and (e) award this mark for answer in (d).
(e)	B1 for writing Po(8) can be awarded if seen in (d) (may be implied e.g. by scoring M1)
	M1 for using Po(8) to find a lower-tail critical region
	Need to see one of the given probability statements or implied by Po(8) and f = 3 seen.
	A1 for [f]= 3 but allow $f \leqslant 3$ Correct answer only scores 3/3

	Notes
(a)(i)	B1 for a completely specified distribution. Condone B(6,25%) must be in (a)(i)
(ii)	B1 for a contextualised reason involving randomness, independence or constant probability Must mention "prize" and "packet" and for constant prob "0.25" in correct statement.
(b)	1st M1 for a correct expression for P(X = 1) may use P($X \leqslant 1$) – P(X = 0) from tables with X ~ B(6, 0.25) (May be implied by sight of awrt 0.356 or answer in range) 2nd M1 for writing or using 2P(X = 1) (1 – P(X = 1)) NB M0M1A0 is possible Allow just 2P(X = 1) (1 – P(X = 1)) or a numerical expression with any p = P(X = 1) except p = 0.25 provided 0 < p < 1
(c)	M1 for writing or using 1 – P($X \leqslant 1$) A1 for awrt 0.466 (calc: 0.46606445….)
(d)	1st B1ft for mean = np and variance = $np(1-p)$ where p = 'their (c)' ft their $0.466 \neq 0.25$ Any ft values must be correct to at least 3sf 1st M1 $\pm\left(\frac{29.5 \text{ or } 30 \text{ or } 30.5 - \text{their mean}}{\text{their sd}}\right)$ 2nd M1 dependent on 1st M1 for using a continuity correction 30 ± 0.5 1st A1ft for (±) correct standardized expression (ft their μ and σ) or z = awrt ± 1.52 2nd A1 awrt 0.064 [Use of p = 0.25 giving N(20, 15) can score B0M1M1A1A0 i.e. max 3/5]
NB	Use of binomial (leads to 0.063398… or 0.063477…) but scores 0 marks.
